

GEP

DAY 7

1. Is the sum of $1 + 2 + 3 + \cdots + 1993$ odd or even?
2. A well is 10 meters deep. A snail climbs 2 meters from the bottom of the well during the day, and then slides down 1 meter at night. How many days does it take for the snail to climb out of the well?
3. 8 students have to cross the river by boat, and there is only one small boat (without boat workers) that can only carry 4 people at the ferry. If they all have to cross the river, at least how many times do they have to use this boat to cross the river?
