

1.  $210 + 6 - 12 - 19 =$  \_\_\_\_\_.

2. Qiqi did calculation exercises and did 15 questions in 5 minutes. At this speed, she can do \_\_\_\_\_ questions in 8 minutes.

3. One day, Jiajia was picking a type of grass with three leaves in the big forest. Suddenly, she picked a type of grass with four leaves. At this time, she found that the grass she picked had a total of 40 leaves, and she already had \_\_\_\_\_ grass with three leaves.

4. There are a total of \_\_\_\_\_ squares in the figure below.

5. Haohao has 22 pieces of candy, and Yuanyuan's candy is 3 pieces more than half of Haohao's. Then Haohao gives Yuanyuan \_\_\_\_\_ pieces of candy, and they both have the same number of candies.

6. In the following two calculations, the same Chinese characters represent the same numbers, and different Chinese characters represent different numbers:

$$\boxed{\overline{\text{数学花园}} + \overline{\text{探秘}} = 2015}, \quad \boxed{\overline{\text{探秘}} + 1 + 2 + 3 + \cdots + 10 = \overline{\text{花园}}}$$

So  $\overline{\text{数学花园}} = \underline{\hspace{2cm}}$ .

7. Teacher Wang teaches in a special school. He can take one day off after three days of class. It is known that his first day off this semester is on Tuesday, so his fifth day off is  $\underline{\hspace{2cm}}$ .

8. Use sticks with a length of 6 cm to make a square. It takes 4 sticks to make a square with a side length of 6 cm. It takes at least  $\underline{\hspace{2cm}}$  sticks to make 5 such squares.

9. Fill in the "+" or "-" in  $\square$  of the formula  $1\square 2\square 3\square 6\square 12$ . There may be a total of  $\underline{\hspace{2cm}}$  different results.

10. Fill in the numbers 2, 0, 1, 5, 9 in the blanks. So that each row and each column have a 2,0,1,5. It is required that the same numbers cannot be diagonally adjacent (except 9). Then the first five positions of the fifth line are \_\_\_\_\_ .

			2	0	1
0	1	5			
	2	0	1	5	

11. 1 kilogram of soybeans can be made into 3 kilograms of tofu, and 6 kilograms of soybeans are needed to make 1 kilogram of soybean oil. 1 kilogram of tofu earns 3 yuan, 1 kilogram of soybean oil earns 15 yuan. There is a batch of soybeans totalling 460 kilograms. After being made into tofu or soybean oil and sold, 1800 yuan was obtained. \_\_\_\_\_ kilograms of soybeans in this batch were made into soybean oil.

12. For Question 12:

Please fill in the ten-thousands place + thousands place on the answer sheet with the number of what you consider to be the best question in this test; the answer range is from 01 to 11.

Please fill in the hundreds place on the answer sheet with the level of difficulty you consider for the overall test paper, with "1" being the easiest and "9" being the most difficult, totalling nine levels; the answer range is from 1 to 9.

Please fill in the tens place + units place on the answer sheet with the number of what you consider to be the most difficult question in this test; the answer range is from 01 to 11.

(All answers within the specified range will receive points, and all assessments will be considered as the individual's valid assessment of this test paper. No answers or answers beyond the specified range will not receive points.)
